THE LOGDNA STORY

LogDNA is a leader in multi-cloud and on-premise log management solutions. Its promise of speed with infinite scalability has been proven with some of its thousands of customers logging more than 20TB+ per day. Because it isn't tied to legacy architecture, LogDNA has been able to build solutions that address how today and tomorrow's hypergrowth and enterprise organizations operate.

Data and workloads are everywhere - not only in various clouds and on-premise, but in IoT devices, PoS systems, and even robots and satellites. While organizations need to be able to draw logs from everywhere, then store and analyze them, they need their developer and DevOps teams to focus on their company's products and services, not learning tools. Calming the chaos is not only a benefit. It's a requirement for operating effectively within an organization.

In July 2019, LogDNA announced its 300 percent year-over-year growth. On the heels of this announcement, in September 2019, LogDNA was named one of the 20 Rising Stars as part of the Forbes 2019 Cloud 100 list; the definitive list of the top 100 private cloud companies in the world, published by Forbes in partnership with Bessemer Venture Partners and Salesforce Ventures.
